## **Oroville Dam Auxiliary Spillway Incident**

On 02/12/17 at 1603 hours the California State Warning Center (CSWC) received notification from the Department of Water Resources (DWR) automated line that the Oroville Dam was in failure status due to extreme scouring of the auxiliary spillway. The CSWC are made notifications according to SOP. All down stream warning points were notified.

Per the DWR Flood Operations Center and California Data Exchange Center (CDEC) as of 02/25/17 at 0600 hours:

- Current releases from Oroville Dam (50,000 cfs) are within the downstream channel capacities in the Feather River.
- Inflows are at 28,000 cfs.
- The current lake elevation is 846.58 feet. As result, no water is flowing over the auxiliary emergency spillway.
- The plan to prevent further erosion utilizes trucks, helicopters, and hand crews to move large rocks and gravel to fill holes in the emergency spillway.

## **Activations**

- The Cal OES State Operations Center (SOC) activated at Level 1 in support of the Oroville Dam Incident.
- The Department of Water Resources (DWR) Department Operations Center (DOC) has relocated to the SOC.

# SITUATION SUMMARY

## 2017 February Winter Storms

### Cal OES Inland Region

- Cal OES Inland Region are monitoring the Operational Areas (OA's) who are dealing with high water levels and other impacts from the current February 2017 storms.

### **Levee Breach**

#### **San Joaquin County**

On 02/20/17 at 1945 hours, the California State Warning Center (CSWC) received notification from the National Weather Service advising a levee break occurred on the right bank of the San Joaquin River on Road 2075, southwest of Manteca, San Joaquin County.

- Per the DWP FOC report 02/24/17:
  - RD 2058 - Rock protection was installed for two sites and requested Flood Fight Specialist to assess the site, as well as materials for new protection. Based on the assessment, 900 feet of erosion protection has been recommended.
  - RD 2075 - Erosion is being monitored by ICT 5. DWR contractor has placed 900 feet of material out of the estimated 1,300 feet needed. RD is requesting another seepage berm (approx. 1,000 feet long).
  - Sandbag rings are being used to mitigate flood threat until a seepage berm can be installed.
  - [FOC requested DWR DOW Liaison onsite.](#)
  - [DWR and United States Army Corps of Engineers \(USACE\) technical assistance assessed the site and recommended a seepage berm to mitigate the flood threat. PL 84-99 Direct Assistance has been approved and USACE has mobilized a contractor.](#)
- Per the Cal OES Inland Duty Officer (IDO) on 02/24/17:
  - There are active flood fighting operations in the area and all residents of rural south Manteca should remain vigilant and alert.
  - The public has been advised to stay off this road way and avoid the area completely if possible.
  - Heavy equipment and significant truck traffic is expected on Airport Way.

# Key Points

**Overview:** Mostly dry conditions today except extreme northern CA. Weak weather systems will move through California starting Saturday with periods of rain and mountain snow likely. The system does not look very strong and impacts will be minor.

**Flooding:** Creeks, rivers, streams, some mainstream rivers, reservoirs and the entire water system has been significantly stressed over the past 6-7 weeks. It will take some time before waters decrease enough to no longer be of concern. Roads, hillsides, and steep grades all remain vulnerable to settling with rock and mud slides possible.

# Key Hazards

## Today

- Mainly dry except moderate rain and mountain snow northwest CA, Sierra and foothills.

## Saturday-Monday

- Cold and weak systems will move over the region.
- These systems may cause just enough snow for mountain travel delays.
- Rainfall/snowfall amounts will generally be light.
- Only minor impacts expected.

## Tuesday-Thursday

- Drier once again with streams, creeks, and some main stem rivers running high. No new weather or water hazards expected at this time.

# **WEATHER OF CONCERN**

## **Weather of Concern**

- A weak but cold weather system will move across Northern California today, then another Sunday into Monday. The Sunday – Monday system will likely bring enough snow to impact travel across the mountains, particularly Sunday evening.

# WEATHER SYNOPSIS BY REGION

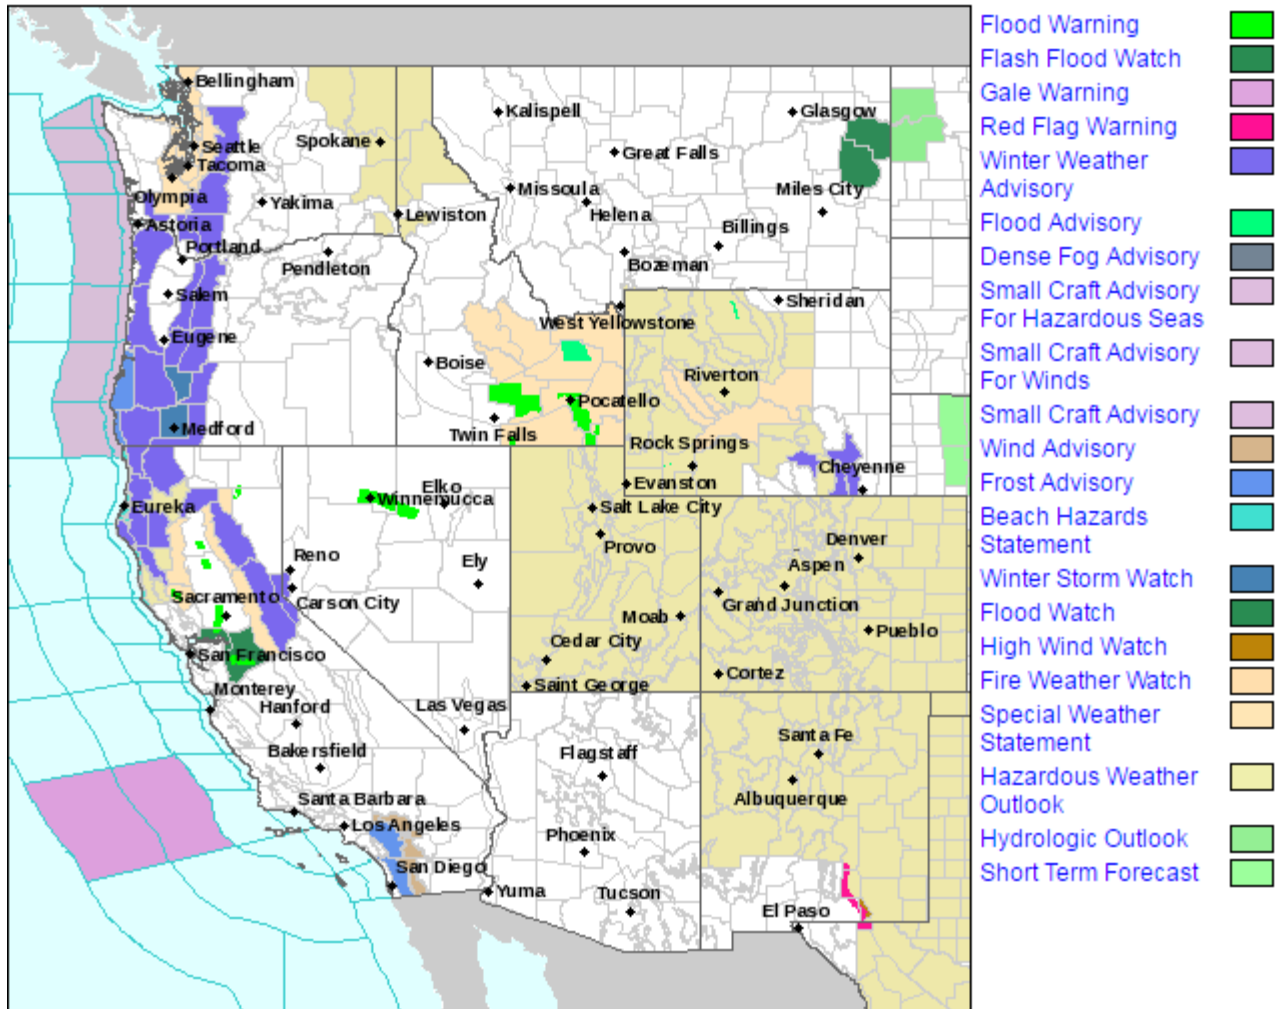

## **NORTHERN CALIFORNIA**

The air mass over the region will remain cold and unstable through Monday. A few showers are possible just about anywhere each day, but mainly in the mountains, with snow levels near 2000 feet in the north and 4000 feet in the south. The best chances for precipitation will be later today and tonight in the north as a weak offshore low pressure area drops in from the north, in western areas on Saturday, and in southern areas late Saturday as the low continues moving southward. A second low pressure area will cause increasing showers in northwest portion of the region by early Sunday, then farther east and south throughout the day as the low progresses southeastward. The final showers will end Monday night. Winds will be fairly light through midday Sunday then increase out of the south with gusts of 25-35 mph in open wind-prone areas. High pressure will gradually build over the region beginning Tuesday. Drier and warmer weather with occasionally gusty Northwest-Northeast winds can be expected through the end of next week.

## **SOUTHERN CALIFORNIA**

After a cold start to the day, mostly sunny and mild conditions can be expected this afternoon. Many inland areas are currently at or below the freezing mark, including much of the San Joaquin Valley and the high desert. Temperatures this afternoon will warm into the 40s in the mountains to the 60s at lower elevations in the regions with light north winds of 10-20 mph in the mountains. This weekend, a pair of troughs will bring breezy conditions and light precipitation to the region. The first one will reach the central coast Saturday afternoon and most of Southern California during the day Sunday. The second system will arrive Sunday night. Both of these systems will focus on Southern California where 1.00 – 1.50 inches of rain may fall on the south-facing aspects. Central California will see 0.50 – 1.00" along the central coast and Sierras. The snow level may dip to 3,500 feet Sunday afternoon and evening and some light accumulations will be possible on I-5 and I-15. West winds of 20-30 mph will be possible in the Sierras and high desert Saturday afternoon and Sunday night. Next week looks drier and warmer with a ridge building over the region by the end of the week. Temperatures will climb into the 70s at lower elevations with light offshore flow possible by next weekend.
